About our Ready Mix Concrete

Our **Ready Mix Concrete** is ideal for larger 'pours'. So if your project requires more than 6.0 cubic metres then this *could* be the most cost effective method of supply. Find out more on our [Ready Mix Concrete](#) page.

About our Barrow Mix Concrete

Barrow Mix Concrete is ideal for smaller domestic projects. This is partly because you can order quite small amounts and partly because smaller projects tend to have site access problems. In fact, if your project can't be accessed easily by the larger concrete-delivery vehicles, then a barrow of concrete can often be the best solution.

And that's why with our **Barrow Mix Concrete** deliveries, we offer a FREE barrow service to deliver the concrete *exactly* where you need it. Mixed on-site, **Barrow Mix Concrete** can be produced to suit your exact specifications. The really good news is that you only pay for what you use. So no concrete is wasted, and no wasted expense either. Find out more on our [Barrow Mix Concrete](#) page.

Collection Service

Our state-of-the-art wet-batching plant also allows for collections of **Ready Mix Concrete** and **Screed** of 0.5 cubic metres upwards. We manufacture all our **concrete** using the very latest technology at our **Rochdale** plant. This allows us to produce high-quality concrete products which we can deliver quickly and efficiently across **Manchester** and the surrounding areas.
